Bringing Together Value and Performance

AKMA servo motors from Kollmorgen are designed for critical medium to heavy washdown environments and variable weather applications.

These lightweight, workhorse motors incorporate a hardened anodized aluminum coating, a versatile form factor, and strong chemical resistance. See how the AKMA motors meet your motion needs in a wide range of harsh environments with reliability and outstanding value.

DURABLE

Kollmorgen motors feature an anodized aluminum coating and vented design to deliver dependable operation in tough washdown environments.

CLEANABLE

Whether in food and beverage contact zones or dry clean environments, AKMA motors deliver the high cleanability you demand.

VERSATILE

Wherever high-torque, lightweight motors are critical, and space is limited, the AKMA motor fits your specific design requirements.

Purpose-Built Performance Where You Need It

Every Kollmorgen product is engineered and manufactured to play a vital role in your machine design. The AKMA motor is no exception, offering a lightweight design and high reliability in harsh environments where caustic chemical washdowns are not applied.

BUILT FOR DURABILITY

- Hard anodized aluminum coating provides strong chemical resistance in a wide pH range to withstand common cleaning agents and enhance durability in washdown
- Coating is less vulnerable to scrapes, dents, and paint flaking than conventional epoxy
- Highly durable stainless-steel shaft meets functional safety requirements
- Chromium oxide shaft inlay increases shaft hardness to reduce shaft seal wear and maximize operational life
- “One-piece” housing structure eliminates the O-ring and helps to prevent water ingress
- Vented design equalizes pressure inside and outside the motor for enhanced durability and reduced ingress through seals and O-rings

BUILT FOR CLEANABILITY

- Smooth surface design for cleanability in food and beverage contact zones
- Round housing eliminates flat surfaces where contamination droplets can pool
- IP69K rated sealing allows higher pressure exposure for food-grade environments

BUILT FOR VERSATILITY

- Lightweight design makes the AKMA motor easy to install and maintain
- High torque density in a smaller-size motor delivers critical performance improvement across demanding environments

BUILT FOR SAFETY

- Available with HIPERFACE DSL® and EnDat 2.2 safe encoders, enabling integration into applications that require functional safety compliance

The versatile and lightweight AKMA motor is designed for the demanding washdown environments found in food and beverage processing. It is also ideally suited for precision motion in pharmaceutical production and packaging as well as harsh outdoor environments.

AKMA Servo Motors

Parameters	Sym	Units	AKMA2x				AKMA3x		
			1	2	3	4	1	2	3

About Kollmorgen

Kollmorgen has more than 100 years of motion experience, proven in the industry's highest-performing, most reliable motors, drives, linear actuators, AGV control solutions and automation platforms. We deliver breakthrough solutions that are unmatched in performance, reliability and ease of use, giving machine builders an irrefutable marketplace advantage.
